6.0	BeginLifespanVersion	BEGINLIFE	Date and time at which this version of the spatial object was inserted or changed in the spatial data set. -- Description -- NOTE This date is recorded to enable the generation of change only update files. -- Guidance -- Conditional. Data Providers should report this information, if available. Data Providers must report this information if the endLifespanVersion value is reported.	date (8)	Conditional, mandatory for endLifespanVersion is not null	YYYYMMDD	Kat.I
6.1	EndLifespanVersion	ENDLIFE	Date and time at which this version of the spatial object was superseded or retired in the spatial data set. -- Description -- NOTE This date is recorded primarily for those systems which "close" an entry in the spatial data set in the event of an attribute change. -- Guidance -- Optional. If the version of the spatial object being reported is still unchanged in the national datasets, then Data Providers are not required to provide this information. For example, Data Providers reporting under WFD 2016 should report the current version of the spatial object: therefore the endLifespanVersion attribute is not required. This attribute is kept in the data model to allow future updates and support the traceability of changes to objects previously reported.	date (8)	Optional	YYYYMMDD	Kat.I

6.4	HmwbPhysicalAlteration	HMWB_PA	For HMWBs only, report the physical alteration that has resulted in the designation of the surface water body as a HMWB. In the context of designation, physical alterations mean any significant alterations that have resulted in substantial changes to the hydromorphology of a surface water body such that the surface water body is substantially changed in character. In general, these hydromorphological characteristics are long-term and alter both the morphological and hydrological characteristics. 6.5	HmwbWaterUse	HMWB_WU	For HMWBs only, report the water use for which it has been designated. 'Wider environment' can refer to designation in order to maintain nature protected areas and also archaeological sites and patrimony (see CIS Guidance Document No. 4 – Identification and Designation of Heavily Modified and Artificial Water Bodies). Quality checks: Element check: A valid option must be selected from the enumeration list. More than one option can be selected. 6.6	Reservoir	RESERVOIR	For heavily modified river or lake water bodies, indicate whether the water body is a reservoir that has been created by damming a river ('Yes') or an existing lake ('No'). It is the recommendation of this Guidance that reservoirs formed by damming rivers should be reported as heavily modified river water bodies. However, Member States may choose to report reservoirs formed by damming rivers as lake water bodies if they wish. The 'reservoir' schema element must be reported so that Member States can clarify the designation. 'Yes' = Select only if the whole surface water body represents a reservoir (or part of a reservoir) created by damming a river. (surfaceWaterBodyCategory must be reported as 'RW' and naturalAWBHMWB as 'Heavily Modified'). 'No' = Select if the whole surface water body represents a reservoir (or part of a reservoir) created by modifying an existing lake, or if the surface water body includes some small reservoirs which are not significant enough to be identified as separate surface water bodies. (surfaceWaterBodyCategory must be reported as 'LW' and naturalAWBHMWB as 'Heavily Modified'). 'Unclear' = Select in such cases where the reservoir has been created by damming a water body which contained chained rivers and lakes. (surfaceWaterBodyCategory must be reported as 'RW' or 'LW' and naturalAWBHMWB as 'Heavily Modified'). 'The water body is not a reservoir' = Indicates that the river or lake water body is not a reservoir. Quality checks: Conditional check: Report if surfaceWaterBodyCategory is 'RW' or 'LW' AND naturalHeavilyModified is 'Heavily Modified'.	string (1)	Conditional, mandatory for MODIFIED = 'Y'. 6.7	SurfaceWaterBody IntercalibrationType	INT_CAL_TP	If the surface water body type corresponds with an intercalibration type, report the intercalibration type code (not name). The intercalibration type reported in this element must be appropriate to the surface water body's Category. If there is no corresponding intercalibration type, select 'Not relevant'. Report 'Not relevant' for territorial waters. Quality checks: Element check: SurfaceWaterBodyIntercalibrationType must be reported. A valid option must be selected from the enumeration list. More than one option can be selected. Within-schema check: 'Not relevant' should be reported if SurfaceWaterBodyCategory is 'TeW'. 7.0	SurfaceWaterBodyTransboundary	TRANSB	Indicate whether the surface water body reaches the national border, extends across it or is shared with other countries (i.e. the river is the national border). Not relevant for territorial waters. Quality checks: Element check: Transboundary must be reported. A valid option must be selected from the enumeration list. Only one option can be selected.
